Sequence 17, Application US/09171945

Patent No. 6277599

GENERAL INFORMATION:
APPLICANT: Emery, Stephen
APPLICANT: Edge, Michael Derek
TITLE OF INVENTION: Monoclonal Antibody to CEA
TITLE OF INVENTION: Antibody, and Their Therap
FILE REFERENCE: Monoclonal Antibody to CEA
CURRENT APPLICATION NUMBER: US/09/171,945

CURRENT APPLICATION NUMBER: GB9703103.3

PRIOR FILING DATE: 1997-02-14

PRIOR APPLICATION NUMBER: GB9609405.7

PRIOR FILING DATE: 1997-04-29

NUMBER OF SEQ ID NOS: 131

SEQ ID NOS: 131

SEQ ID NO 17

FEMALE OF SEQ ID NOS: 2.1

Patent No. 6309861

GENERAL INFORMATION:
APPLICANT: Ambrosius, Dorothee
APPLICANT: Rudolph, Rainer
APPLICANT: Schaeffner, Joerg
APPLICANT: Schaeffner, Joerg
APPLICANT: Schwarz, Elisabeth
TITLE OF INVENTION: Process for the production of naturally folded and secreted
TITLE OF INVENTION NUMBER: US/09/553,498

CURRENT APPLICATION NUMBER: EP99107412.1
PRIOR APPLICATION NUMBER: EP99107412.1
PRIOR FILING DATE: 1999-04-26
NUMBER OF SEQ ID NOS: 10

i Sequence 67, Application US/08190199A

i Patent No. 5830663

j GENERAL INFORMATION:

APPLICANT: EMBLETON, Michael J.

APPLICANT: JONES, Peter T.

APPLICANT: WINTER, GREGORY P.

TITLE OF INVENTION: TREATMENT OF CELL

NUMBER OF SEQUENCES: 70

CORRESPONDENCE ADDRESS:

ADDRESSEE: PILLSBURY MADISON & SUTRC
STREET: 1100 New York Avenue, N.W.

CITY: Washington
STATE: D.C.

COUNTRY: U.S.A.

ZIP: 20005-3918

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC COMPATIBLE

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Microsoft Word

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/190,199A

FILING DATE: 13-JUL-1994

CLASSIFICATION NUMBER: PCT/GB92/01483

FILING DATE: 10-JUG-1992

PRIOR APPLICATION DATA:

APPLICATION NUMBER: GB 9212419.7

FILING DATE: 11-JUN-1992
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         E SUTRO,

S-08-591-196-16
Sequence 16, Application US/08591196
Patent No. 5977316
GENERAL INFORMATION:
APPLICANT: Chatterjee, Malaya
APPLICANT: Foon, Kenneth A.
APPLICANT: Chatterjee, Sunil K.
TITLE OF INVENTION: MONOCLONAL ANTIBODY 1A7 AND USE FOR 7
TITLE OF INVENTION: TREATMENT OF MELANOMA AND SMALL CELL
NUMBER OF SEQUENCES: 57
                                                                                                                                                                           COUNTRY: USA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      40
FOR THE CELL CARCINOMA
                                                                                                                                                            Sequence 16, Application US/09293533
; Sequence 16, Application US/09293533
; Patent No. 6509016
; GENERAL INFORMATION:
; APPLICANT: Chatterjee, Malaya
; APPLICANT: Chatterjee, Sunil K.
; TITLE OF INVENTION: MONOCLONAL ANTIBODY 1A7 AND USE FOR
; TITLE OF INVENTION: TREATMENT OF MELANOMA AND SMALL CEL
; NUMBER OF SEQUENCES: 66
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: MORRISON & FOERSTER
; STREET: 755 PAGE MILL ROAD
; CITY: PALO ALTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Version #1.30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Conservative:

Sequence 67, Application US/08881037

Patent No. 6080588

GENERAL INFORMATION:

APPLICANT: Glick, Gary D.

APPLICANT: Swanson, Patrick C.

TITLE OF INVENTION: DNA BINDING ANTIBODIES

NUMBER OF SEQUENCES: 113

CORRESPONDENCE ADDESS:

ADDRESSEE: Morrison & Foerster

STREET: 755 Page Mill Road

CITY: Palo Alto

STATE: CA

COUNTRY: USA

ZIP: 94304-1018

COMPUTER READABLE FORM:

MEDIUM TRYE: FIOPPY disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US 08/443,540

FILING DATE: 13-WAY-1995

CLASSIFICATION: 530

ATTORNEY/AGENT INFORMATION:

NAME: KONSK!, Antoinette P:

REFERENCE/DOCKET NUMBER: 203442110710

English 34; 115pp; SEQ ID NO Disclosure;

The present invention describes a hybrid polypeptide (I) comprising: (a) a calf residues from a polypeptide associated with a disease of protein aggregation or conformation to bind an aggregating form of the polypeptide or to a disease-associate conformer of the polypeptide; and polypeptide or to a disease-associate conformer of the polypeptide; and polypeptide or to a disease-associate conformer of the polypeptide; or polypeptide binds with greater affinity to a disease causing or infectious conformer of the polypeptide that is the source of the polypeptide binds with greater affinity to a disease causing or infectious conformer of the polypeptide that is the source of the polypeptide motif compared to a benign form of the polypeptide. Also described: (I) a nucleic acid molecule; (3) a cell comprising the vector; (4) detecting an isoform or a Presc form of a prion polypeptide or a polypeptide associated with a disease of protein aggregation, (i) preparing a plyceptide or a polypeptide associated with a disease of protein aggregation, (7) preparing a hybrid molecule with a disease of protein aggregation, (7) preparing a hybrid molecule that specifically interacts with one conformer of a prion protein. (1) has neuroprotective, nootropic, antidiabetic, anti-idioxype antibody that cerebroprotective, antiparkinsonian, cytostatic, nephrotropic, antidiabetic, anticonvulsant, cerebroprotective, antiparkinsonian, cytostatic, nephrotropic, antidiabetic anti-idiabetic, and can be used in diagnosing or treating diseases of protein aggregation or conformation, such as Creutzfeld-Jakob disease, transinger amploidosis associated with chronic inflammatory gisease, receive amploidosis associated with chronic inflammatory disease, immunoglobulin amyloidosis, reactive amyloidosis associated with chronic inflammatory disease, immunoglobulin amyloidosis, reactive amyloidosis associated with chronic inflammatory disease, immunoglobulin amyloidosis, reactive amyloidosis associated with chronic inflammatory disease, immunoglobulin am copic, cardiant, I can be used in invention can be myeloma, plasma medullary carcinoma in a sample transthyretin gene, amyotrophic lateral sclerosis, Pick's disease, Parkinson's disease, Frontotemporal dementia, multiple myeloma, plasma cell dyscrasias, familial amyloidotic polyneuropathy, medullary carcinor of thyroid, chronic renal failure, congestive heart failure, senile cardiac and systemic amyloidosis, chronic inflammation, atherosclerosis or familial amyloidosis. The present sequence is used in the exemplification of the present invention.

The present invention describes cell death-inducing agents containing the degradation product of an antibody which can recognise human leukocyte antigen (HLA). Also described: (1) a degradation product of the 2D7 antibody; (2) a similar degradation product of an antibody which is: (a) one containing an amino acid sequence of (SEQ ID NO:6) with 253 amino acids substituted, deleted, inserted and/or added and being functionally equivalent to the parent; (c) one containing the CDR amino-acid sequences of (SEQ ID NO:2) and (SEQ ID NO:2) and (SEQ ID NO:2) and (SEQ ID NO:4) but with some amino acids substituted, deleted, inserted and/or ID NO:4) but with some amino acids substituted, deleted, inserted and/or added and being functionally equivalent to the parent; (3) a process for producing an antibody with an increase of activity by degrading a HLA-recognising antibody, or by degradation products of antibody, inducing agents containing the degradation products of antibody, inducing acids inhibiting cell proliferation containing the degradation

products of antibody, comprising the produced antibodies or 2D7 antibody, comprising the degradation products of antibody, comprising the produced antibodies or 2D7 antibody; and (7) remedies for autoimmune diseases containing the degradation products of antibody, comprising the produced antibodies or 2D7 antibody. The 2D7 antibody has cytostatic, immunosuppressive, antiinflammatory and dermatological activities. The cell death-inducing agents are applicable in antitumour agents and remedies for autoimmune diseases for treating e.g. cancer, Crohn's disease and systemic lupus erythematosus. The present sequence represents a mouse IgG2b light chain, which is used in the exemplification of the present invention.

                                                                                                                                                                                          The MAD recognises the epitope on alpha/beta TCR and includes a med resonse. It is highly effective in clinical application before, aft during bone marrow transplant surgery, in treatment of cancer and autoimmune diseases, and has applications in immunoregulation. Abs also be used in detection of immunocompetent T-cells. (Updated on 2003 to correct PA field.)
                                                                                                                                                                                                                                                                            135

19H22 (isotype IgG2b/kappa). The mAb is produced by hybridoma cells obtained by immunising CB6 fl mice with human RANK-L protein, and fusing Spleen cells with X63-Ag8.653 myeloma cells. 19H22 mAb is specific for buman RANK-L, having a binding affinity characterised by a dissociation constant of about 10 power -10 M. RANK-L is a member of the tumour constant of about 10 power -10 M. RANK-L is a member of the immune system, bone development and homeostasis. The invention provides altered, chimeric and humanised 19H22 antibodies, including Fab or F(ab')2 fragments, antibodies comprising the light and heavy chain variable regions of 19H22. These are used in methods for the diagnosis, treatment and prevention of osteopenic diseases, including rheumatoid arthritis, osteoporosis, metastatic and primary bone cancer, wear debris induced osteologis, metastatic and primary bone cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diagnosis, treatment and prevention of osteopenic diseases, including rheumatoid arthritis, osteoporosis, metastatic and primary bone cancer, wear debris induced osteolysis or osteoarthritis, and immune diseases including psoriasis, insulin dependent diabetes, inflammatory bowel disease or multiple sclerosis. Methods are also provided for the recombinant production of the antibodies, using isolated nucleic acids and transfected host (preferably mammalian) host cells, and a method of diagnosing conditions associated with Th1 T-cell activity or osteoclast development and activation, in particular those listed above

antibody (806.077 Ab). Host cells or transgenic organisms transformed with DNA encoding the antibody, are used to make the antibody or conjugate is used in a medicament suitable for intravenous administration. The conjugate can be used for cancer therapy, selectively killing tumour cells. The antibody can be used for in vivo or in vitro diagnosis of cancer. (Updated on 17-OCT-2003 to standardise OS field)

The VK sequence is one of 23 (AAR21286-308) expressed from a single chain fragments specific for 2-phenyl-5-oxazolone (phox). It was prepd. using cDNA generated from mRNA from mice immunised with phox coupled to chicked serum albumin. The VH and VL kappa sequences were separately amplified by CCR (AAQ22474-84) and ligated into fdCAT2 (AAQ23463) for expression on the phage surface as fusions with gene III. The resulting library of clones was diverse; 23 hapten binding clones were sequenced revealing 8 vH genes (A-H; AAR21286-92). Most clones were VH-B combinations so a further hierarchical library was prepd. by "crossing" VH-B with the Vk repertoire. The resulting library was screened for hapten binding and 24 clones sequenced. 14 new partners (AAR21293-308) for VH-B were identified. Nearly all the Vk genes were "co.x-like"; only f, (from the identified Nearly all the Vk genes were "co.x-like"; only f, (from the original library) and h, p, q, and r (from the hierarchical library) were VkoxI type genes. Of the 24 hierarchical clones, 2 were of type "p". The Coriginal library and h, p, q, and r (from the hierarchical library) were the suggests that phage bearing scry fragments having weak affinit- ies can be selected with antigen, probably due to the avidity of the multiple antibody heads on the phage. The different combinations could also be isolated on a basis of antigen affinity. See also AAR21260-307, 309-311; AAR22450, 565-581

                                                                                                                                                                                                                                                                                                                                                                                                  The specification describes antibodies or polypeptides for microbial lipase, which enhance the hydrolytic activity of the enzyme. The polypeptides, antibodies or immunocomplex are useful for biocatalysis objectonversion reactions (e.g. hydrolysis, interesterification, esterification, alcoholysis, acidolysis or aminolysis); in biosensor technology; in bioremediation; in preparing fragrances or flavours and chemical modification of alcohols, acids, esters or fats; in cosmetic, pharmaceutical and food industries; in preparing detergents; or in identifying, purifying or measuring microbial lipases. The present sequence represents the variable light chain of monoclonal antibody BFI which is directed against the Candida rugosa lipase.
                                                                                                                                                                                                                                                                                      Ξ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and

The polypeptide comprises a first polypeptide comprising the antigen binding portion of of the light chain variable region of an antibody and a second polypeptide comprising the antigen binding portion of the heavy chain variable region of an antibody and at least one peptide linker linking the first and second polypeptide chains. The resulting single chain polypeptide can be used in diagnostics, therapy (in vivo and in vitro), imaging, purifications and biosensors. (Updated on 25-MAR-2003 to correct PR field.)

The mature heavy chain (AAR99643) and mature light chain (AAR99644) of the mouse anti-bovine growth hormone monoclonal antibody 3C2 can be utilised in novel single chain binding molecules (AAR99645-48), in which the hypervariable regions from IgG1 3C2 MAb are joined by peptide linkers derived from the Fv regions of an IgA class anti- phosphorylcholine myeloma antibody, MCPC-603. The single chain molecules retain the binding specificity of the light and heavy chains and have the advantages of smaller size, greater stability and reduced cost. They can be used in therapy, diagnostics, imaging, purification and biosensors. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             243

 Portions of the heavy chain (AAR97376) and light chain (AAR97377) of murine IgG anti-bovine growth hormone monoclonal antibody 3C2 can be incorporated into novel single polypeptide chain binding molecules (see also AAW02188-90). These are expressed in host cells using DNA constructs (see also AAT36460-62) that include heavy and light chain encoding sequences (AAT29056 and AAT29057) joined by linker moieties. Following expression and refolding, the single chain binding molecules show the binding characteristics of the aggregate of the 2 original heavy and light chains of the variable region of the antibody. (Updated on 25-MAR-2003 to correct PF field.)

```
The VK sequence is one of 23 (AAR21286-308) expressed from a single chain FY library. The library produces a diverse repertoire of antibody fragments specific for 2-phenyl-5-oxazolone (phox). It was prepd. using cDNA generated from mRNA from mice immunised with phox coupled to chicked serum albumin. The VH and VL kappa sequences were separately amplified by CRR (AAQ23474-84) and ligated into fdCAT2 (AAQ2343) for expression on the phage surface as fusions with gene III. The resulting library of clones was diverse; 23 hapten binding clones were sequenced revealing 8 VH genes (A-H; AAR21264-71) in a variety of pairings with 7 VK genes (a-g; AAR21286-92). Most clones were VH-B combinations so a further hierarchical library was prepd, by "crossing" VH-B with the VK clones sequenced. 14 new partners (AAR21293-308) for VH-B were clones sequenced. 14 new partners (AAR21293-308) for VH-B were coriginal library) and h, p, q, and r (from the hierarchical library) were coriginal library) and h, p, q, and r (from the hierarchical library) were voiginal library) and h, p, q, and r (from the hierarchical library) were coriginal library) and h, p, q, and r (from the hierarchical library) were voiginal library) and h, p, q, and r (from the hierarchical library) were voiginal library) and h, p, q, and r (from the hierarchical library) were voiginal library) and h, p, q, and r (from the hierarchical library) were voiginal library) and h, p, q, and r (from the hierarchical library) were voiginal library) and h, p, q, and r (from the hierarchical library) were voiginal library) and h, p, q, and r (from the hierarchical library) were voiginal library) and h, p, q, and r (from the hierarchical library) were voiginal library) and h, p, q, and r (from the hierarchical library) were voiginal library) and h, p, q, and r (from the hierarchical library) were voiginal library) and h, p, q, and r (from the hierarchical library) were voiginal library) and h, p, q, and r (from the hierarchical library) were voiginal library hierarchical librar

from a library prepared from OK3T producing cells. The library was screened with a probe complementary to a region in the mouse kappa constant region. The OK3T sequence was used in CDR- grafting experiments to prepare humanised antibodies. NOTE: Data found in patent WO9109968 has been used to index this entry. (Updated on 25-MAR-2003 to correct PA field.)
